# PRODUCT INTRODUCTION

## SF 10 MABS

An anti-lock braking system developed by NingBo SAFE, is exclusively used in two-wheel vehicle. It is composed of hydraulic control unit (HCU), electronic control unit (ECU) and motor. Compact structure, small size (86,6 x 64 x 98,1 mm), light weight (746 g) etc. meet the assembly - size requirements of miniaturization and lightweight in two-wheel vehicles. Front and rear wheels can be controlled precisely and independently; dual channel, single channel configuration are optional by customers; it is suitable for many kinds of vehicles, e.g. scooter, motocross and high-end sport motorcycle. It provides the shortest braking distance and stability for drivers, and improves the safety and enjoyment of travel at the same time.
